Course Objective

This course examines the basic models of international trade and finance, emphasizing their theoretical foundations, empirical relevance and policy implications. The course also illustrates how to use these models to analyze the rise of global value chains and the growth effects of financial globalization. The course centers on the strategies and knowledge required for a successful international trade transaction. To be successful in international trade, organizations need to optimize payment options, risk mitigation strategies, use of financial tools, contracts and effective cash flow management. The course also covers techniques and plans to resolve disputes should they arise.

Learning Outcomes

On successful completion of this course, candidates should be able to:

- 1. Describe types of commercial, currency and other financial risks involved in international trade transactions and describe methods available to minimize them.
- 2. Negotiate payment method as a part of the terms and conditions of a contract for an international venture, considering payment options, current trade research, benefits and relative risk for buyer and seller.

3. Describe bonds and types of guarantees and how banks and international financial institutions support international trade finance

4. Explain the range of products and services provided by various models of export credit agencies and how they can support organizations in their international trade transactions.

5. Develop a cash flow plan as part of an annual budget and the development of financing packages.

6. Explain the range of documents in international trade together with other terms (such as Incoterms)

7. Resolve any international business disputes through alternative dispute resolution techniques where possible before considering litigation. Describe basic environments (legal, social, economic) in which a business operates.

8. Explain emergent trends in foreign trade financing such as Blockchain Technology

Exams: The exams aim at assessing various dimensions of learning: knowledge of concepts and theories and the ability to apply this knowledge to real-world phenomena, through analyzing the situation, distinguishing problems, and suggesting solutions. The written exams can be of two types, i.e. open-ended questions, which can also be in the form of problems or multiple-choice questions. The case could also be carried to the Dean's Office for additional disciplinary action.

Assignments: Quizzes and Homework (Assignments) might be applicable. Scientific Research Ethics Rules are very important while preparing assignments. The students should be careful about citing any material used from outside sources and reference them appropriately.

Missed exams: Any student missing an exam needs to bring an official medical report to be able to take a make-up exam. The medical report must be from a state hospital.

Projects: Not applicable

Attendance: Attendance requirements are announced at the beginning of the term. Students are usually expected to attend at least 70% of the classes during each term.

Objections: If the student observes a material error in his/her grade, he/she has the right to place an objection to the Faculty or the Department. The claim is examined and the student is notified about its outcome.
