| Course Level                                   | Bachelor                                  |
| Learning and Teaching Techniques of the Course | Lecture, Question-Answer, Problem Solving |

# **Course Objective**

You will develop the ability to write detailed requirements for system changes and enhancements and ensure system changes are well tested by developing test cases and managing defect resolution along with coordinating user acceptance testing. A solid grasp of the end-to-end process of making effective decisions with data will give you an edge to facilitate enhanced decision making. In addition, you will learn leading industry software to build a solid skills portfolio in data modelling, emerging technologies, project management, and change and risk management.

## **Learning Outcomes**

At the end of this course, you will be able to:

- 1. Understand and perform the importance of, and problems associated with the business analysis effort in organizations.
- 2. Understand and perform the tasks and techniques used to organize and coordinate business analysis efforts
- 3. Understand and perform the tasks and techniques used to prepare for and conduct elicitation activities and confirm the results.
- 4. Understand and perform the tasks and techniques used to manage and maintain requirements and design information from inception to retirement.
- 5. Understand and perform the tasks and techniques used to identify the business need, address that need, and align the change strategy within the enterprise.
- 6. Understand and perform the tasks and techniques used to organize requirements, specify and model requirements and designs, validate and verify information, identify solution options, and estimate the potential value that could be realized.
- 7. Understand and perform the tasks and techniques used to assess the performance of and value delivered by a solution and to recommend improvements on increasing values.

## **Course Outline**

## Student will learn to

- 1. Use a variety of business analysis techniques, skills and knowledge to support new or improved innovative business processes.
- 2. Develop and document business processes and business models according to established business analysis practices, timelines and project goals.
- 3. Develop strategies to bridge gaps between requirements and existing systems using appropriate business analysis techniques and documentation to support change to a business system.
- 4. Assess solutions to business improvements using established benchmarks and evidence-based decision-making techniques.
- 5. Use a project management approach to communicate technical and business information to a variety of stakeholders.

|       | Weekly Topics and Related Preparation Studies      |   |  |  |  |  |  |  |  |
|-------|--|---|--|--|--|--|--|--|--|

| 1   | Recognize and distinguish the basic concepts such as data, information, and knowledge in the field of Management Information Systems and know the processes to be followed for data acquisition, storage, updating, and security.          | x   |                          |     | х   | x   |                 | X   | 5     |
| 2   | Develop and manage databases suitable for collecting, storing, and updating data.  |     |                          | X   | X   |     |                 |     | 4     |
| 3   | As a result of his/her ability to think algorithmically, and easily find solutions to problems concerning basic business functions.  |     | X                        | X   |     | х   | X               | X   | 5     |
| 4   | Learn programming logic, and have information about current programming languages.   |     |                          | X   |     |     |                 |     | 4     |
| 5   | Be able to use up-to-date programming languages.   |     | X                        | X   |     | X   |                 |     | 5     |
| 6   | Be able to take part in teamwork or lead a team using knowledge of project management processes.   | x   |                          |     | Х   |     | Х               |     | 5     |
| 7   | Know ethical and legal rules, and use professional field knowledge within the scope of ethical and legal rules.  |     |                          |     |     |     |                 | X   | 3     |
| 8   | Know the fundamental areas of business administration namely management and organization, production, finance, marketing, numerical methods, accounting, etc., and have the knowledge and skills to work in-depth in at least one of them. |     |                          |     |     |     |                 | x   | 3     |
| 9   | Be able to solve the problems encountered in the field of internet programming by designing web applications.  |     |                          | X   |     | X   | x               |     | 5     |
| 10  | Develop and manage logistics and supply chain management activities  |     |                          |     |     | X   | X               |     | 5     |
| 11  | Adapt his/her theoretical knowledge and the experience he/she will gain through practice at the departments of businesses such as information technologies, R&D, and management to real life.  |     |                          |     |     | х   |                 | x   | 4     |
| 12  | Be able to develop strategies that will  |     | X                        |     | X   |     | X               | х   | 5     |

|              | provide a competitive advantage with<br>his/her advanced knowledge of<br>management strategies and management<br>functions.  |   |   |   |   |   |    |   |   |
|--------------|--|---|---|---|---|---|----|---|---|
| 13           | Develop a business idea, commercialize<br>the business idea, and design and manage<br>his/her venture using entrepreneurial<br>knowledge.  | X |   | X |   | X |    |   | 5 |
| 14           | By using English effectively, they can follow, read, write, speak and communicate universal information in the field of management information systems in a foreign language with professional competence. | X | X | X | X | X | X  | X | 5 |
| Total Effect |  |   |   |   |   |   | 35 |   |   |

#### **Policies and Procedures**

Web page: <a href="https://www.ostimteknik.edu.tr/management-information-systems-english-1241/915">https://www.ostimteknik.edu.tr/management-information-systems-english-1241/915</a>

**Exams:** The exams aim at assessing various dimensions of learning: knowledge of concepts and theories and the ability to apply this knowledge to real-world phenomena, through analyzing the situation, distinguishing problems, and suggesting solutions. The written exams can be of two types, ie. open-ended questions, which can also be in the form of problems or multiple-choice questions.

**Assignments:** Quizzes and Homework (Assignments) might be applicable. Scientific Research Ethics Rules are very important while preparing assignments. The students should be careful about citing any material used from outside sources and reference them appropriately.

**Missed exams:** Any student missing an exam needs to bring an official medical report to be able to take a make-up exam.

**Projects:** A group project with teamwork is welcome.

**Attendance:** Attendance requirements are announced at the beginning of the term. Students are usually expected to attend at least 70% of the classes during each term.

**Objections:** If the student observes a material error in his/her grade, he/she has the right to place an objection to the Faculty or the Department. The claim is examined and the student is notified about its outcome.
